

REPORT: PARITY IMPORT PRICE CALCULATION

ENAP does not regulate or set prices in the Chilean market. Its sole role is the wholesale selling of the different hydrocarbon derivatives to distribution companies, which in turn serve customers directly and set their own sales prices.

Considering the Import Price Parity rule, the Fuel Price Stabilization Mechanism (MEPCO), the Oil Price Stabilization Fund (FEPP) and the mechanisms established by the authority, for this week a variation of 0 pesos is estimated per liter (\$/lt) in the price of 93 and 97 octane gasoline. The same with the price of diesel and LPG for vehicle use, which will not experience any variations either.
